Develop essential skills for when it matters most.

SimVS Monitor Simulation System

A comprehensive monitor simulation system that provides realistic patient monitor training. This cost-effective platform is compatible with both low and high-fidelity manikins. Instructors can monitor students in real time and is suitable for online, classroom, lab or remote locations.

- Ideal for mechanical ventilator training online or lab
- Highly configurable (patient monitor, defibrillator, ventilator, fetal heart monitor, AED)
- Uses dynamic waves for telemetry to provide rich high-definition graphics
- Can be used with patients, simulators or standalone right from a smart phone
- Pre-programmed scenarios or create your own

Using tablets, SimVS provides an advanced clinical education platform to simulate realistic monitor operations (defibrillator, hospital monitor, mechanical ventilator, fetal heart monitor, AED) for a wide range of patient conditions for far less cost than traditional simulation systems.

Prehospital Transport with Ventisim
Defibrillator, hospital monitor and transport ventilator monitor.

Hospital Complete
Defibrillator, hospital monitor and mechanical ventilator simulation. Flexible training tool for any setting. Familiarize learners with all vent waveforms, alarms and operations.

SimVS Online/Mobile - A secure, low bandwidth cloud-based option for distance learning with responsive 2-way communication. Connect to an unlimited number of students via the free student app. Compatible with iOS and Android tablets/smartphones. Easy to use. One password for instructors, one for students.

Optional Add-Ons:

- **Heartisense™ Premium Kit** - enables accurate heart monitor simulation training and feedback.
- **SimAction™ Simulators** - enables manikins to simulate patients experiencing seizures or defibrillation.
